CARBONTOUR

Strategic Planning towards Carbon Neutrality
in the **Tourist Accommodation** Sector

During the project a robust and innovative software tool has been developed which is able to:

✓ **quantify and evaluate the energy consumption and the CO₂ equivalent emissions** resulting from the various tourism accommodation activities

✓ calculate very useful indicators such as **energy consumption and CO₂ equivalent emissions per square meter or per overnight stay.**

CARBONTOUR Software is very user-friendly and can be download free from the project's website: <http://uest.ntua.gr/carbontour>
